

# MOBIVISOR SECURE MAIL

MobiVisor Secure Mail is an application from MobiVisor to secure your corporate email traffic.

## INSTALLATION\*

- In order to use Secure Mail you need to configure the settings via the MobiVisor MDM domain.
- Select as mail types: IMAP/SMTP or ActiveSync.
- Save the configuration
- Push the Secure Mail app to the users' devices
- Login via MobiVisor account, QR code or username/password
- The mail settings are taken from the server
- Missing information can be manually changed by the user directly

## FEATURES

- comprehensively secures your existing e-mail structure
- includes all standard email functions, e.g. change font size, font type and color, connect calendars, add attachments etc.
- Adoption of internal security policies
- converting files to PDF when sending via Secure Mail to prevent access to third parties
- Preventing screenshots of attachments
- Attachments are opened only in the email application

## FURTHER INFORMATION

- Applicable with all common business emails

### Hosting:

- On your company server (on-premise), in our German cloud or a private cloud.
- MobiVisor and all extensions are hosted exclusively in Germany and therefore DSGVO compliant

### Security:

- Uses Pop3 or IMAP standards
- Data transmission done securely with TLS/SSL and cannot be seen or modified during transmission
- Interfaces/ APIs developed within MobiVisor: Data flow to third parties is prevented
- MobiVisor Secure Mail receives the highest rating of A+ in Qualys SSL Labs Test (SSL Server Test)

\*Secure Mail can also be used as a standalone application without MDM. Please feel free to contact us!
