

# MobiVisor Files

MobiVisor Files is an application for the secure management of files within your company.

## Features

- Saving, uploading and sharing company files
- Granting access rights to certain users
- Prohibiting the sharing of content with third-party providers
- Prohibiting third parties from accessing MobiVisor files
- Integration of user databases (e.g. Active Directory) possible
- Additional app features e.g. scan function for documents with automatic storage as a PDF file in the target folder

## Usage

- By adding MobiVisor Files, the application is added to your MobiVisor administration interface
- You can access the interface via "File manager"
- Push the app to the mobile devices of the relevant users via the MDM
- Log the user into the app, e.g. via user QR code
- The user now has access to MobiVisor Files

## Hosting

- On your company server (on-premise), in our German cloud or a private cloud
- MobiVisor and all extensions are hosted exclusively in Germany and are therefore GDPR-compliant

## Security

- Data transfer is carried out securely using TLS/SSL and cannot be seen or changed during transmission
- Content management is supported by the FTP infrastructure (File Transfer Protocol)
- Local data storage - data does not leave the company computer
- Interfaces/ APIs developed within MobiVisor: Data flow to third parties is prevented
- The MobiVisor File Manager receives the highest rating of A+ in the Qualys SSL Labs Test (SSL Server Test).
