MobiVisor File Manager

INTRODUCTION

MobiVisor offers many features that improve and simplify your mobile work. With MobiVisor, you can manage your mobile devices, set security restrictions and use application and content management.

MobiVisor File Manager is like a drop box optimized for enterprise use. It makes it easy to store, manage and share internal company files.

FEATURES

MobiVisor File Manager allows you to share corporate content with your employees and lets them access your corporate content from anywhere, anytime. Files are stored in encrypted form in secure areas. Access to other applications can also be completely disabled. Data transfer is secure with TLS/SSL and cannot be viewed or modified during transfer. Content management is supported by the File Transfer Protocol (FTP) infrastructure.

SPECIAL FEATURES

Local file storage - The files are located on the company computer, so they are not shared with a third party.

Database integration - The integration of users and groups and their management is essential, especially for large companies. Therefore databases (e.g. Active Directory) can be easily integrated into the system and existing structures are thus preserved. If, for example, a user of an Active Directory group wants to share a file in their group, this is easily possible. All other users in the group can then edit the file.

Secure file management - The file manager opens the files within the application. In addition, the application can be restricted so that the files cannot be shared with other applications. In other words, if there is a file worthy of protection that should not be shared via e-mail or WhatsApp, the MobiVisor File Manager can restrict this file by opening the file it contains and disable sharing.

INFRASTRUCTURE

Private Cloud or On-Premise – MobiVisor File Manager is the right solution regardless of the IT infrastructure. MobiVisor File Manager can be hosted in our German cloud, on-premise or in a private cloud. The range of functions is not affected by the type of hosting. On-premise installations use the storage space provided on the servers.

Security guidelines – MobiVisor File Manager applies our strict corporate security policies to prevent unauthorized access to infrastructure, systems and data centers.

Scale – MobiVisor File Manager ensures the highest scalability and reliability for companies of all sizes. This makes the Messenger suitable for both small businesses and large companies.

DATA PROTECTION

Data protection rights – MobiVisor File Manager is a product of IOTIQ GmbH with headquarters in Leipzig. All data and contents are stored exclusively on German servers. Thus, the German and European data protection law (incl. GDPR) is fulfilled.

Data minimisation – As little data as possible is used to operate the File Manager. Personal data is only accessed if absolutely necessary for security or administration reasons.

Integration – All interfaces and APIs to third-party providers have been developed in the MobiVisor File Manager itself. This prevents uncontrolled data outflows.

TECHNICAL DATA

Each data transfer is set up in MobiVisor File Manager via TLS. TLS certificates and settings have the latest security options. MobiVisor File Manager receives the highest score of A+ in the Qualys SSL Labs test (SSL Server Test).
