

MOBIVISOR

by IOTIQ

Why do I need MobiVisor?

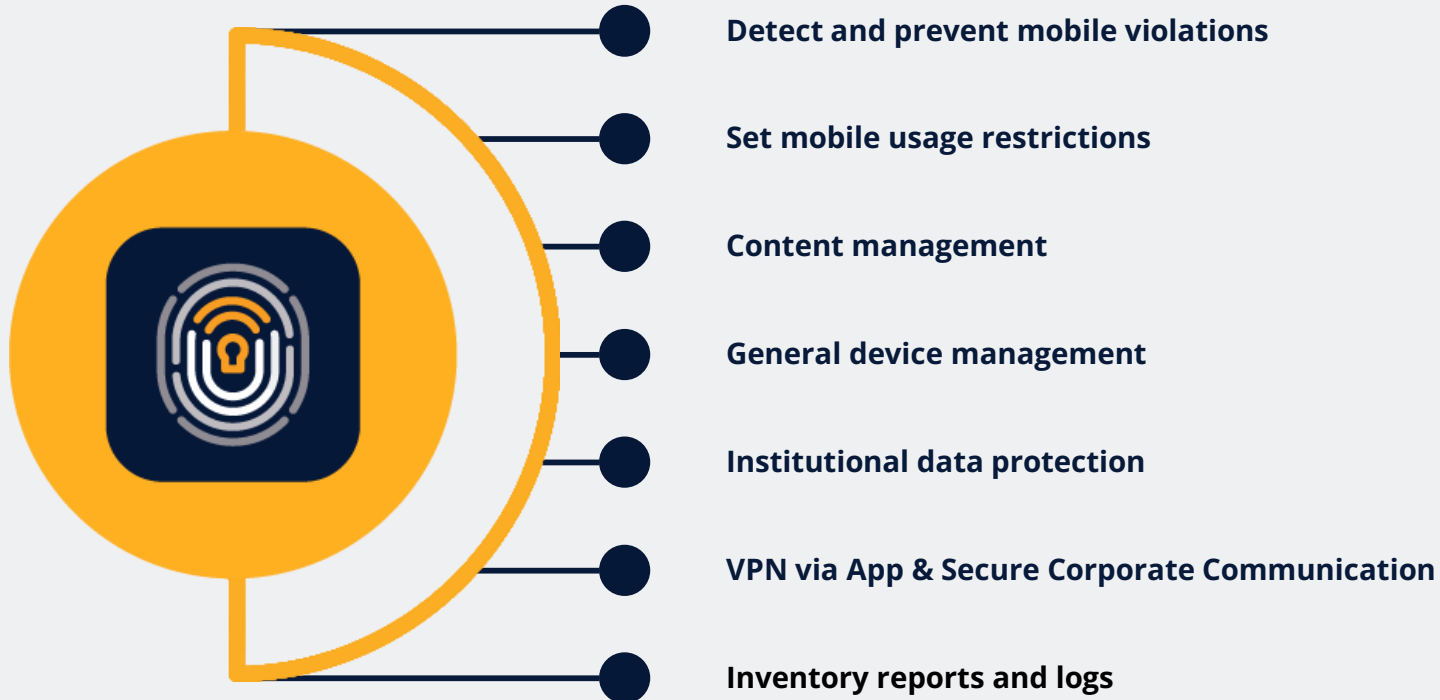

MobiVisor MDM is a great relief for companies, executives and especially administrators, as mobile devices can be managed and secured remotely from a central location.

- ➔ **Management & overview of all mobile enterprise devices**
- ➔ **Compliance with GDPR and data protection guidelines**
- ➔ **Remote support of your employees**
- ➔ **Central app and patch management**
- ➔ **Ensure productive work from everywhere**

MobiVisor Features

MobiVisor's powerful features cover all of your company's individual requirements.

Your personal MobiVisor MDM:

You can use MobiVisor flexibly. Our focus is usability - according to your requirements.

-  **Personal, self-selectable MobiVisor domain**
-  **On-premise or cloud hosting in Germany**
-  **Automated setup for iOS or Android**
-  **Easy to use**
-  **Expandable on request**

How do you use MobiVisor MDM ?

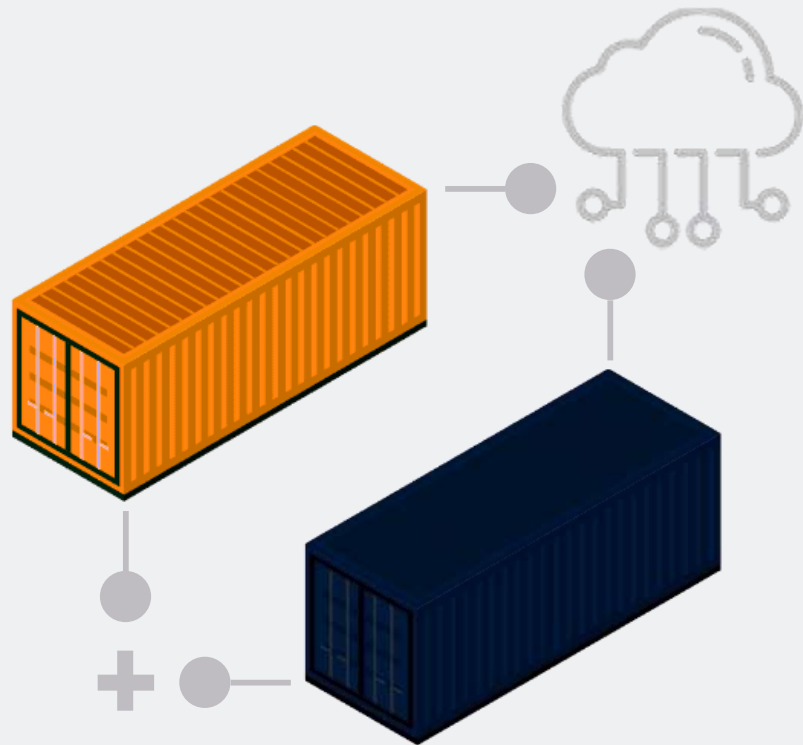

Two devices are one too many! Why not allow employees to use their company mobile devices privately as well? MobiVisor provides your company with optimal security.

Container-Solutions

- The separation of private and business data on only one device through "containers" (work and private profile)
- Secure data to protect your company
- Enables secure work in the home office

Especially suitable for:

- BYOD (Bring Your Own Device)
- CYOD (Choose Your Own Device)
- COPE (Company Owned Privately Enabled)

Which container solution fits my business?

MobiVisor can be set up depending on how your employees are allowed to use the devices.

Bring Your Own Device (BYOD)

- Employees can use their private devices and thus do not have to get used to a new system
- Particularly suitable for smaller companies and start-ups with flexible infrastructure
- Private and business data are cleanly separated

Company Owned, Privately Enabled (COPE)

- Suitable devices for mobile work
- You always keep an overview of the devices and determine which apps your employees use
- Suitable for companies with a large number of employees or in sensitive industries, such as care.

Choose Your Own Device (CYOD)

- Employees select the device with which they can work best
- Suitable for companies whose departments require different devices

Note:

MobiVisor has no access to the private area of the device. Therefore, neither private data can be read out nor private use can be restricted.

Or should it be an enterprise-only device?

Simultaneous private use of mobile work devices is not always desired. MobiVisor provides your solution for this.

Device Owner - Solution

- Configure devices to be used only in a business context - just the way you need it
- Make your enterprise apps easily available to every employee
- Use the single-app mode or the kiosk mode to enable the use of individual apps.
- Full access to the mobile device

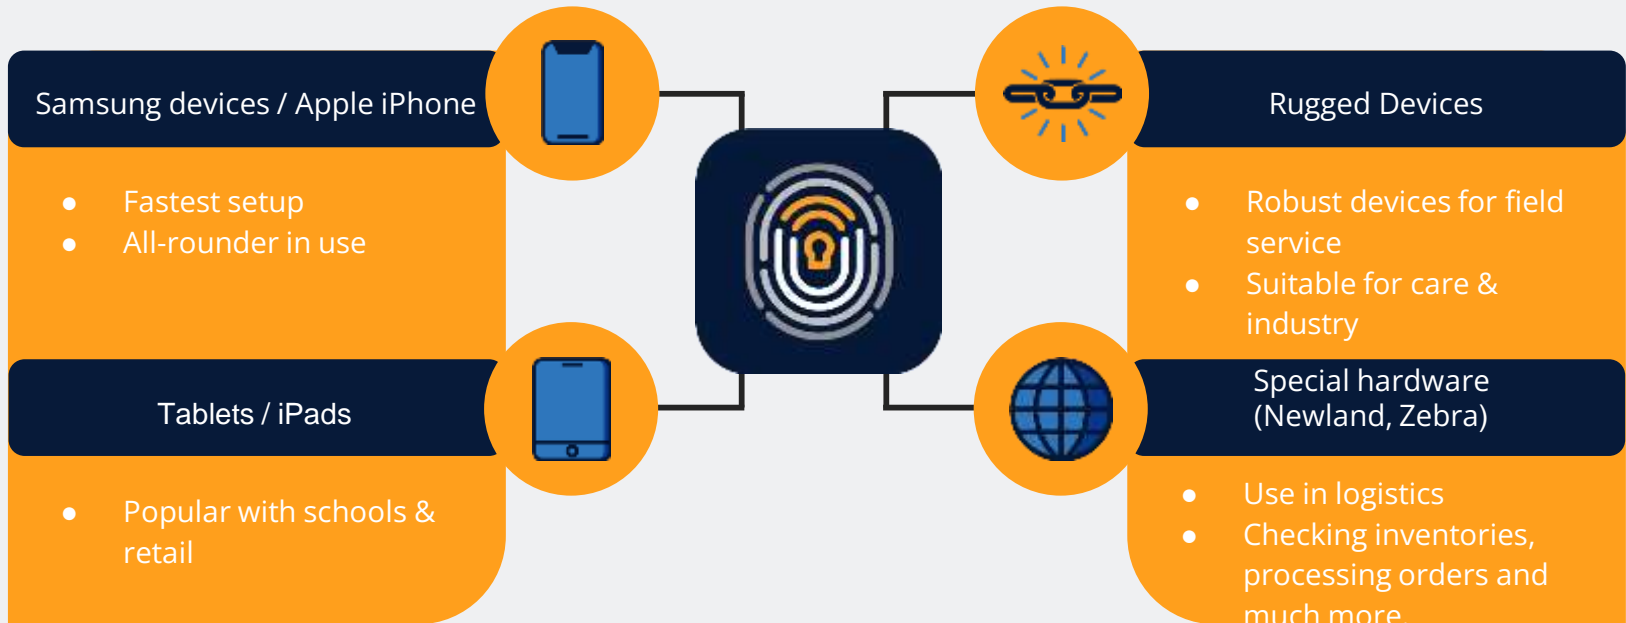

Especially suitable for:

- Companies with increased security requirements, e.g. in administration
- For extensive acquisitions, such as in logistics

What are the hardware options?

Whether you use existing devices or order new ones - MobiVisor supports you wherever mobile devices are used, regardless of the industry.

We would be happy to give you specific hardware recommendations for your needs. Please contact us!

MobiVisor Expansions

MobiVisor Messenger

- Securely send messages, videos and photos
- Easy to use via app
- Manageable via app or web domain
- GDPR compliant

MobiVisor Files

- Exchange files and documents securely within the company
- Especially secure due to hosting in Germany

MobiVisor Secure Mail

- Secure email traffic completely
- Attachments are only opened within the application

MobiVisor per App VPN

MobiVisor per App VPN

The diagram features a large orange circle on the left containing the text 'MobiVisor per App VPN'. To the right of this circle, three horizontal lines extend outwards, each ending in a small orange circle. These lines connect to three bullet points on the right side of the slide, which describe the features of the VPN: activation via app, distribution via MDM, and selection of apps and domains.

A VPN offers:

- Secure internet connection
- Support for mobile working
- Protection from hackers and data theft
- Keep track of network activity

• **Activation of the VPN via app**

• **Distribution of the VPN app via MDM**

• **Selection which Apps + Domains About VPN are to be used**
