

Setup: MobiVisor Secure Mail

- 👉 The Secure Mail application allows you to access your corporate e-mails in a more secure way
- 👉 Once a file is sent over Secure Mail, it is converted to PDF. Therefore corporate data can be shared without the interference of third-party applications
- 👉 Secure Mail prevents users from taking screenshots for security purposes
- 👉 All settings can be configured from the web console. This configuration is sent to all registered devices automatically

How it works:

Configure >
Secure Mail settings

There are two options for a mail type: IMAP/SMTP and ActiveSync. Your organization can choose what fits best.

Mail Type: IMAP/SMTP

Email: sample@example.com

Password: samplePassword

Incoming Auth Type: Plain

Incoming Security Type: SSL/TLS

Incoming Server URL: imap01.zoho.com

Incoming Port: 993

Outgoing Auth Type: Plain

Outgoing Security Type: SSL/TLS

Outgoing Server URL: smtp.zoho.com

Outgoing Port: 465

Save

IMAP/SMTP

Mail Type: ActiveSync

Email: sample@example.com

Password: samplePassword

Server URL: eas.mobivisor.com

Port: 443

Security Type: SSL/TLS

Domain (If Required): sampledomain

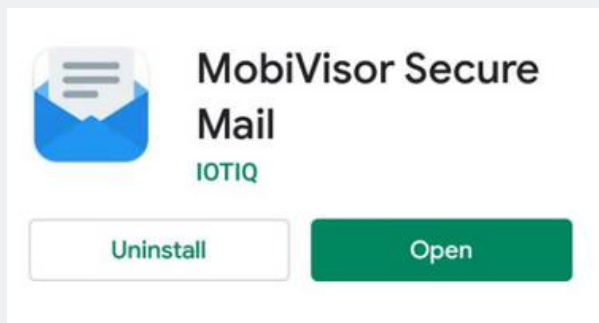

Email Filter: Last Month

Save

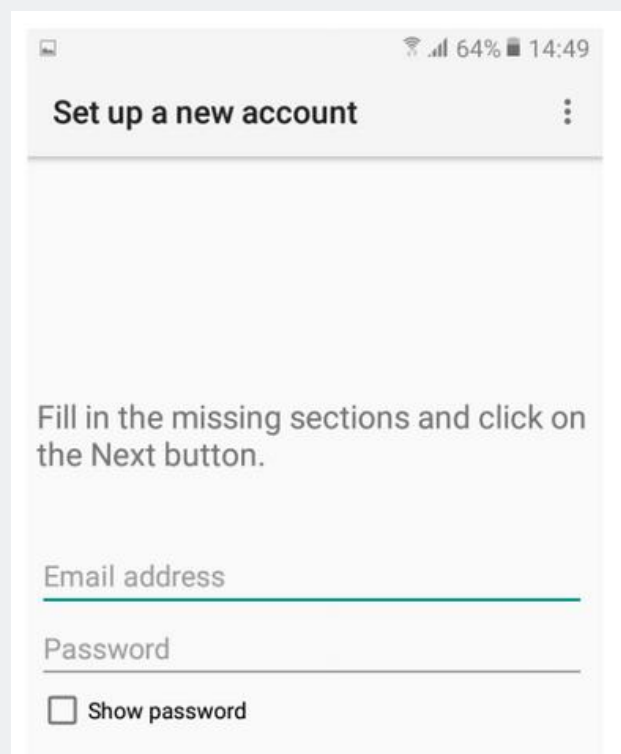

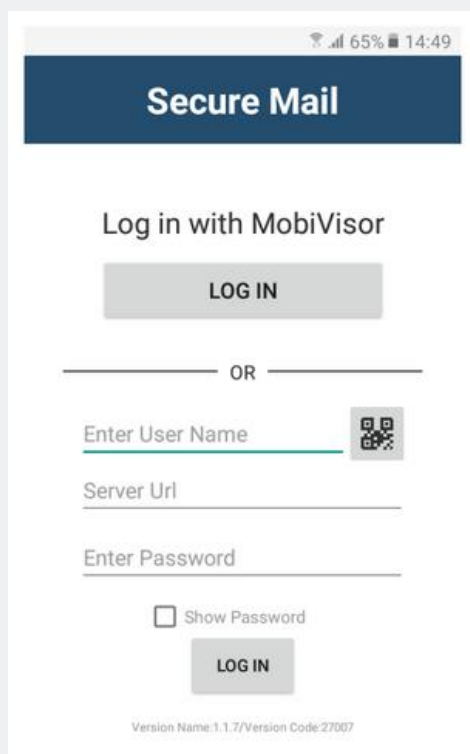

ActiveSync

Setup: MobiVisor Secure Mail

The Secure Mail app can now be downloaded from the Google Play Store.

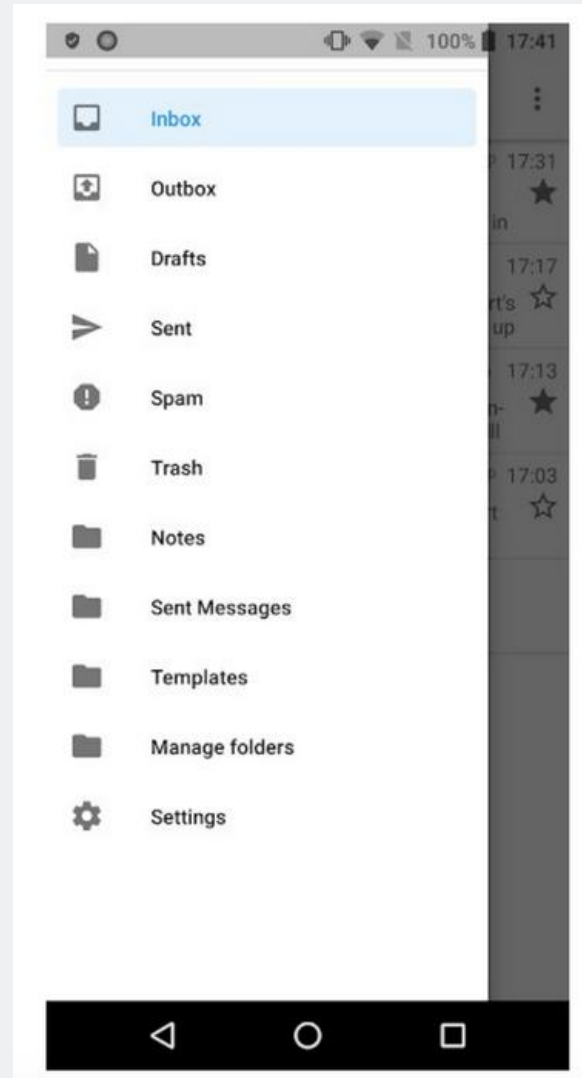

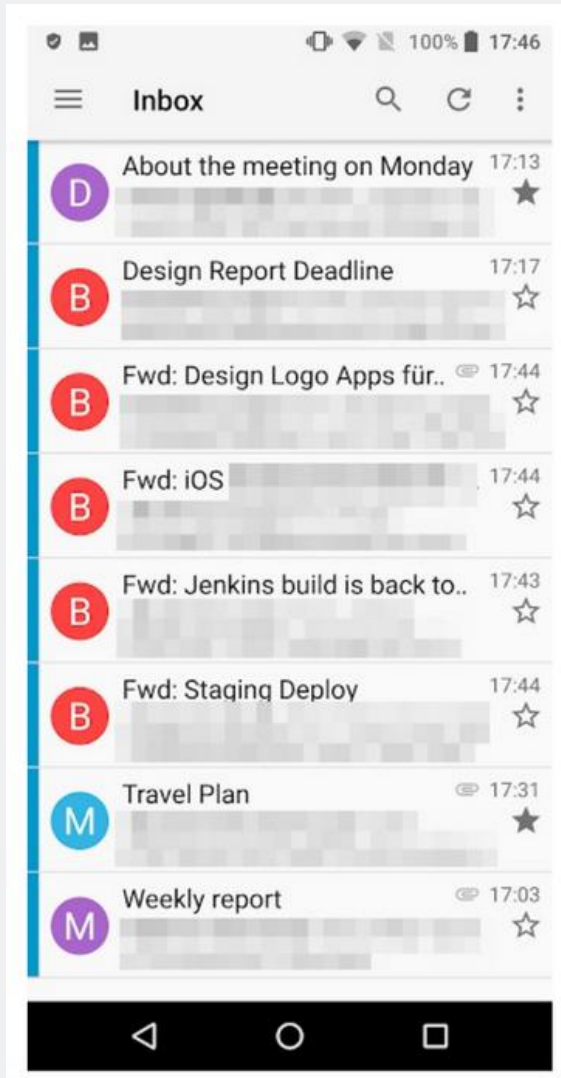

To log in there are three options:

- Login with a MobiVisor account
 - To use this option, MobiVisor MDM should already be installed and the user should already be registered
- Manual login with an e-mail address, password and server URL
- Login with a QR code

Setup: MobiVisor Secure Mail

The mail settings are taken from the server and missing parts (such as e-mail address and password) are filed manually by the user. Registration is then completed.
