

MobiVisor in the health sector

MobiVisor in action for the management and security of mobile devices in hospitals and nursing institutions for easy access to patients data

How MobiVisor helps a hospital to provide digital patients' records

Challenge

Hospitals and other institutions in the health sector are challenged with much paperwork to record patients' data, which is very time consuming and slows down the work. Crucially, it also makes the tracking of care measures and patient data more complicated and more prone to errors.

The biggest task of the hospitals and nursing homes is to provide a digital infrastructure to their employees that facilitates their work on one hand and secures the patients data on the other hand. That means that all mobile devices need to be managed accordingly.

Solution with MobiVisor

Most health institutions have their own app to record their patients data that they require their employees to use on their mobile devices.

With MobiVisor it is possible to distribute this app easily and fast to many devices at once.

Furthermore, MobiVisor can be set up so all apps get updated regularly automatically.

The hospital also decided to use the KIOSK Mode as well as White-and Blacklists for an optimal set up of the devices:

Employees have predefined apps that can be used and that guarantee that patients' data isn't in danger of getting lost anymore. This also ensures compliance to GDPR laws.

The hospital concerned also needed a way to provide their employees with patients' files in a secure manner: for this they used MobiVisor Files, a safe way to store documents and files and to exchange them.

How MobiVisor supports a nursing institution in their internal communication

Challenge

The employees of the Relm hospital have enormous difficulties with their internal communication, having to be careful which information is shared due to GDPR laws. This means they can't just use common messengers like WhatsApp.

Employees don't have an easy and uncomplicated way of communicating with each other, which can slow down processes a lot. For the Relm hospital it therefore is important to have an internal chat, as they also offer homecare with which employees have to coordinate themselves and need access to their patients' data from everywhere.

The hospital has also broadened their services and offers check-ups via video call, which is especially important if a patient is in quarantine. Particularly for elderly people or people with a disability this service is very important. But there are also a lot of other security guidelines which need to be followed.

Solution with MobiVisor

With MobiVisor all insecurities regarding data safety are a thing of the past.

For safe communication MobiVisor offers MobiVisor Messenger, which provides a safe and encrypted alternative in comparison to common messengers.

The other MobiVisor expansions that are used are MobiVisor Secure Mail and Files with which all kinds of documents and files can be sent securely. By using these expansions, the hospital got rid of their sorrows in regards to data security. Furthermore MobiVisor enabled all employees of the hospital to have access to patients' data everywhere they go. For this the hospital decided to use MobiVisor Per-App-VPN. This also makes the virtual check-ups possible - without risk of data leaks.

MobiVisor is a reliable partner in the health sector!

Do you want to know more?

Do you have questions about how MobiVisor and our extensions work, or are you unsure whether MobiVisor MDM fits your company and its challenges?

We are happy to assist you with advice and support! Just contact us by phone or e-mail.

We would also be happy to arrange a personal presentation appointment with you and provide you with a test environment of MobiVisor without obligation.
